

REACH Compliance

REACH (Registration, Evaluation, Authorisation and Restriction of Chemicals) is a cornerstone regulation of the European Union designed to protect human health and the environment from the risks posed by chemicals.

As a non-producer, JC Engineering is not directly required to register with the European Chemicals Agency. However, we take our customers' concerns seriously by ensuring that our suppliers are fully compliant with REACH requirements.

We require our suppliers to pre-register substances and provide up-to-date compliance documentation. In addition, our products are periodically tested to verify that no Substance of Very High Concern (SVHC) exceeds 0.1% w/w in any of our steel articles.

This system of continuous monitoring, combined with supplier audits, ensures that our materials meet all regulatory standards and that any potential risks associated with chemical substances are proactively managed.
